DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Davies Building is a three story, brick commercial building which faces east on Kansas avenue, the main shopping street in downtown Topeka. The building's design has been influenced by the High Victorian Italianate style.

The first story has been extensively remodeled and the original building surface has been covered with black ceramic tile on the south side and green marble on the north. The original stone piers to either side of the building and the columns which frame the centrally placed entrance to the upper stories still remain. The columns, one to either side of a single door, have been raised on rusticated plinths. The shafts of the columns have been smoothly finished and are crowned with a stylized Corinthian order. Resting on the abaci are large brackets with recessed panels carved with stylized acanthus leaves. A carved frieze connects the tops of the brackets. The brackets appear to support a two story oriel window which makes the already out of proportion columns seem even smaller. The entranceway, which was originally arched, has been covered over.

The upper two stories appear much as they did originally, though the facade was painted a light yellow in the 1960's, destroying the pleasing contrast between the brick and the limestone trim. The facade has been symmetrically arranged with a two story oriel window as the central bay. The facade has been enriched by several finely executed brick moldings and stone carvings which add an interesting texture by modulating light and shade on the face of the building. A limestone stringcourse separates the first and second stories. There are two double-hung windows with transoms separated between floors by two rectangular panels of bricks laid to resemble billet molding on the oriel. The area above the second story windows on the oriel has been decorated with two recessed panels.

To either side of the oriel on each story are three double-hung windows with transoms that have been separated with thin brick piers divided by a limestone block at the lower line of the transom. A limestone string course visually divides the second and third stories by running along the top of the windows. Above this stringcourse is another band of limestone molding which has been carved with vegetative motifs. The three windows to either side of the oriel align with those below. The brick piers separating the windows have been accented with limestone bases and blocks at a line established by the transoms. The window groupings are capped by a smooth band of limestone and have been completed by a segmental arch which is crowned by a carved stone molding and has dressed limestone impost blocks. Between the arch, which has been formed of brick and limestone voussoirs, is an area which has been divided into three parts by the continuation of the window piers and filled in with a billet molding formed by bricks. The entablature projects out slightly from the face of the building and is composed of a series of concave molded brick brackets which support the cornice. Above the cornice is a band of metal flashing.

STATEMENT OF SIGNIFICANCE

The Davies Building at 725, 727 Kansas avenue in Topeka was erected in 1887 for local investor B. M. Davies.

Davies, who had earlier engaged in the hardware and lumber business in Illinois, came to Topeka in 1877 and with his brother James purchased a Topeka lumber yard. The Davies Brothers Lumber Co. was for the next ten years one of the largest and most successful in the state. Benjamin Davies was also associated with a Topeka bank and was an active investor in real estate.

Topeka building permit number 5349 was issued May 17, 1887, for the Davies Building. The estimated cost of the structure was \$10,000 and the projected completion time was September, 1887. According to newspaper reports excavation for the building had begun in early May. By mid-July the frame had been raised, and the cut stone and red brick front was in place in August. By September 27, 1887, the building was completed and the tenants were open for business.

(The architect who designed the building has not yet been identified. A newspaper story one year later reported that architect T.H. Lescher was preparing plans for B. M. Davies for a building at 732 Kansas. Whether or not Davies retained the same architect isn't known, but the possibility exists that Lescher also designed the first building.)

A variety of tenants have occupied the building. From all indications there has always been at least one jewelry firm in the building. A current occupant, Wolfe's Jewelers, has been a prime tenant since 1898. In the late 1890's Dr. C. F. Menninger had his office there for several years and around the turn of the century architects J. C. Holland and Frank Squires were officed there. The Washburn College School of Law used the second floor from 1911 to 1913.

Davies retained ownership of the building until his death in 1913.

The Davies Building has continued to house businesses and offices. It is one of the last remaining commercial buildings which date from Topeka's boom period of the late 1880's. Although the building has been altered on the ground floor, it is still distinguished by the fine quality of its craftsmanship in the stone carving and brick moldings. The Davies Building is an important link with the past and adds variation to a generally nondescript commercial area.
